

Musical Fidelity Takes the Cake

We are proud to announce that Musical Fidelity has won the prestigious EISA award for 2020/2021 in the category "High End Integrated Amplifier".

Musical Fidelity has always designed fabulous big amplifiers, following its belief that you can never have too much power. Now under Austrian ownership, and sharing a stable with Pro-Ject Audio Systems, it's delivered the M8xi, offering a massive 550W – which it comfortably exceeds from its dual-mono construction. Inputs extend to both digital and analogue audio options, but this isn't just a big prize-fighter of an amp: it's also fast and nimble, delivering music with both speed and accuracy,

not to mention masses of detail. If you want your amp all in one box, and superlative performance, this is the one to buy.

Combining electronics normally found in high end separates in a single chassis, the M8xi is better than the sum of its parts outperforming components in much higher price ranges.

The sheer size and impression of the cabinet complement the high output. The fine finish and attention to detail reflect the extreme low distortion levels.

The output stage efficiency levels have been increased thus yielding about 10% more power for similar power supply voltage.

The whole driver stage is pure Class A. The resulting measurements in distortion are lower than 0.005% in the audible frequency range with hardly any changes from 10 kHz to 50 kHz. An outstanding achievement and validation of the circuit design and PCB layout.

The M8xi sounds effortless, and fluid. Large scale music has depth and width paired with an incredible dynamic presentation. It sounds like a superb small Class A amplifier but with limitless headroom.

Perfection!
